Less is More

How Ratios Can Help You Use Cleaning Products Safely

PRE-READING

CONCENTRATED: the manufacturer has taken most of the water out of the product. *This orange juice is concentrated.* You have to add water.

DILUTE: to add water. *Don't drink that concentrated orange juice*. You should *dilute* it first with water.

RATIO: the measure of one thing relative to another. For every can of orange juice, you should add three cans of water. The *ratio* of orange juice to water is one to three or 1:3.

The good thing about concentrated products is the package can be smaller. You get *more* product in *less* packaging A smaller container means less trash. *But* you have to carefully check the label. If it says "concentrate" or "dilute with water," you must add water to use the product safely.

What
if I don't want
a gallon? I just want
some on my sponge.
Isn't it okay to use a
little bit on a damp
sponge?

Not
so fast. You can
get a rash or breathing
problems if you don't
add water to a
concentrate.

Mix It Up!

The directions on some packages tell you how to mix up a gallon. What if you want more or less than a gallon? You'll have to scale up or down, keeping the ratios the same. Use the chart below to practice scaling up and down.

	Cleanser	Water
The directions say:	⅓ cup	1 gallon
To make half that amount, combine:		
To make a quarter of that amount, combine:		
To make five times that amount, combine:		

Suolleg 2	t₁¼ cnbs	eoiwt
1 quart	dnɔ 9Ţ/Ţ	dnarter
1/2 gallon	1/8 cup	half
Mater	Cleanser
